Pedro David García López

Infrastructure Engineer · DevOps & Developer

Cartagena, Región de Murcia, Spain · pedrodavidg88@gmail.com ·linkedin.com/in/pedrodavidgarcialopez ·pytocino.github.io

// PROFESSIONAL PROFILE

Infrastructure engineer focused on DevOps and container platforms. I deploy and run in production a Docker Swarm platform with around 60 containers, manage self-hosted GitLab CE, maintain CI/CD pipelines with near-daily deployments and rolled out monitoring with Prometheus and Grafana. Solid background in Linux, networking, PKI/TLS and identity (LDAP, OIDC, Entra ID) in regulated defence-sector environments (ENS, ISO 27001), plus hands-on experience as a developer (Laravel, React, .NET, Python).

// TECHNICAL SKILLS

Containers: Docker, Docker Compose, Docker Swarm, Portainer; Kubernetes cluster design (kubeadm)
Observability: Prometheus, Grafana, alerting
CI/CD: GitLab CI/CD, GitLab Runner, GitLab CE administration
Systems: Linux (Ubuntu), Windows Server, Active Directory, Microsoft Entra ID
Networking & security: Nginx (reverse proxy), TLS/PKI, DNS, LDAP, OIDC/SSO
Databases: PostgreSQL, MySQL, SQL Server
Languages: Python, PowerShell, PHP/Laravel, React/TypeScript, C#/.NET
Spoken languages: Spanish (native), English (advanced, Cambridge B2)

// PROFESSIONAL EXPERIENCE

SAES, S.M.E. · Cartagena, Spain — Mar 2025 – present
Digital Infrastructure Engineer

Container platform & CI/CD

- Deployed and run in production a single-node Docker Swarm platform managed with Portainer: around 60 active containers, stacks, overlay networks and an Nginx Proxy Manager reverse proxy with TLS termination using the corporate CA.
- Containerised and shipped in-house services to production: an ASP.NET Core API with PostgreSQL, a Python microservice and a Laravel + React web platform.
- GitLab CI/CD pipelines for testing, building and automatically deploying containers, with deployments to production almost every day.
- Administration of self-hosted GitLab CE: migration to HTTPS, SSO with Entra ID (OIDC), major upgrades and maintenance.
- Proposed the design of a Kubernetes (kubeadm) infrastructure on five bare-metal nodes in an air-gapped environment.

Observability

- Rolled out monitoring with Prometheus and Grafana, which many colleagues across the company now use as the basis for their dashboards and alerts.

Systems

- Administration of a hybrid Microsoft environment (Active Directory, Entra ID, Intune, GPO, corporate PKI) and automation with PowerShell and Python.

Development

- Built the internal applications I deploy: a people-management platform with 140 users (Laravel + React + MySQL) and an expeditions app (.NET 10, ASP.NET Core, EF Core, PostgreSQL, Entra ID authentication).

Universidad Politécnica de Cartagena · Cartagena, Spain — Apr 2024 – Jun 2024
Full-Stack Developer Intern

- Web server maintenance and full-stack development (Laravel, React).

// EDUCATION

Deploying applications with Docker — Docker Certified Associate (DCA) · 30-hour course · 2026 · certification exam in October 2026

Higher Vocational Diploma in Web Application Development · CIFP Carlos III, Cartagena · 2022 – 2024
